BCP Bolivia's NIM improved QoQ due to an increase in loan dynamism...

Loan evolution ⁽¹⁾ and internal overdue loans ratio (%)

NIM increased 7 bps QoQ aligned with loan growth primarily in the Retail Banking segment, mainly in the mortgage segment. However, NIM continues under pressure due to interest rate limits and loan portfolio mix guidelines.

Impact on NIM of lending rate caps and loan portfolio mix guidelines started to stabilize in 2016

- Approximately 50% of BCP's lending portfolio is currently subject to lending caps and about 10% of its total deposits are subject to minimum deposit rates.

The internal overdue loans ratio and NPL ratio increase QoQ, mainly in Retail Banking. In line with this the cost of risk increase 6 bps, it is important to note that this ratio was impacted by the deceleration of loans.
